Imagine you are on board Utopia in charge of all communications. Open them when necessary and answer even when it is not asked. Utopia is made fast to the shore with a mooring scheme of 4-2-3 forward and aft and has three shakles in the water of the starboard chain. She is about to leave Dixieville harbour.

1) You ask the Port Control for permission to initiate navigation.
2) The Port Control allows you to proceed.
3) The Pilot wants to know if the anchor chain is leading at 2 o'clock and the way it is working.
4) He wants the 1st officer to pull on board the lines leading at right angles to the centreline from the head to the shore and the ones leading aft.
5) He wants the 2nd officer to haul on board all the lines except the ones leading aft from the stern to the shore.
6) The Captain wants the boatswain to clutch the windlass and to reduce the length of the chain to one shackle.
7) He wants to cast off all lines at the head and the stern.
8) He wants to pick up the anchor until it is stowed in position in the hawsepipe.
9) The manoeuvring stations inform the lines are on board.
10) You tell the Port Control that you are not anchored, or made fast to the shore, or aground, your destination, that your depth under the waterline is deeper forward and that you intend to start navigation.
11) The Port Control gives you the weather forecast (variations in wind, sky, precipitation, visibility) and tells you that the tide is flooding and that a vessel is sailing towards the river mouth.
12) You ask the Port Control if there are any obstructions for you to enter the navigable part of the waterway.
13) The Port Control says there aren't.

You proceed towards the river mouth and the vessel proceeding in the same direction sends a distress message.

14) She says that a man has fallen into the water and expresses her necessity of a helicopter with doctor and of assistance to look for the man.
15) The Coast Guard Radio asks you to be the command ship.
16) You say that you intend to do so.
17) You hear when the naval helicopter asks the other vessel for identification (how),

for the place over which it is safe for her to hover and for the wind.

18) You ask the vessel the way she receives your message.

19) She says 5/5.

20) You tell her that you are going to assist her.

21) She says she doesn't need my help because the man is already on her rescue boat.

22) You say O.K.

23) She tells you she is in the area between the landward boundary and the adjacent coast of a traffic separation scheme and that she is not in my way.

24) You tell the Coast Guard that you will continue your voyage because the vessel doesn't need you.

When you reach the river mouth, the Pilot prepares to disembark.

25) The Pilot Boat says she is on her way to you and asks you to give her shelter from the wind.

26) She asks you to prepare both ladders.

27) She asks you to correct an error you have made.

28) She asks you to keep course and speed.

The Pilot disembarks and the Pilot Boat goes away.

29) The Captain asks the Pilot to recommend a course to steer.
