Imagine you are on board Utopia in charge of all radio communications. Open the radio communication whenever it is necessary. You have three shackles of the starboard chain in the water. You are about to leave the harbour.

1) You ask the Port Control for permission to initiate navigation.
2) The Port Control allows you to proceed.
3) The Captain wants the Boatswain to clutch the windlass and reduce the length of the chain to one shackle.
4) The Boatswain answers he is going to do it.
5) The Captain wants the 1st Officer to pull on board the lines leading at right angles to the center line from the head to the shore.
6) The 1st Officer answers he is going to do it.
7) The Captain wants the 2nd Officer to haul on board all the lines except the ones leading aft from the stern to the shore.
8) The 2nd Officer answers he has done it.
9) The Captain wants to know if the anchor chain is leading at 2 o'clock and the way it is working.
10) The 1st Officer answers.
11) The Captain wants to cast off all lines at the head and at the stern.
12) He wants to pick up the anchor until it is stowed in position in the hawsepipe.
13) The manoeuvring stations inform that the lines are on board and the 1st Officer that the anchor is stowed.
14) You tell the Port Control that the stone-built structure at which you have lied alongside is clear, that you are not anchored, or made fast to the shore, or aground, your destination, that your depth under the waterline is deeper forward and that you intend to start navigation.

15) The Port Control accepts your information and gives you the weather forecast (variations in wind, sky, precipitation, visibility) and tells you that a vessel is sailing towards the river mouth and that a buoy indicating the position of an isolated hazard has no lights.
16) You ask the Port Control if there are any obstructions for you to enter the navigable part of the waterway.
17) The Port Control says there aren't.

You proceed towards the river mouth and the vessel ahead proceeding in the same direction sends a distress message.

18) She says that a man has fallen to the water and expresses her necessity of assistance to look for the man and of a helicopter with doctor.
19) The Coast Guard Radio answers the assistance is on its way.
20) The Coast Guard Radio asks you to be the command ship.
21) You say that you intend to do so.
22) You hear when the helicopter asks the other vessel for identification, for the place over which it is safe for her to hover and for the wind?
23) The vessel replies to all the questions. She gives some wrong information and she corrects herself.
24) The helicopter asks her to repeat her answer.
25) The vessel does so.
26) You ask the vessel the way she receives your message.
27) She says 5/5.
28) You tell her that you are going to assist her.
29) She says the man is already on her rescue boat so she doesn't need your help.

30) You say O.K.
31) She tells you she has rested intentionally in the area between the landward boundary and the adjacent coast and that she is not in your way.
32) You tell the Coast Guard that you will continue your voyage.
33) The Coast Guard Radio tells you that the tide is flooding and the mandatory speed.
34) You say O.K.
35) The Pilot Boat asks you to prepare the combination ladder for the Pilot to disembark.
36) You say that you intend to do so.

The Pilot disembarks and you proceed to open sea.
